

PICK UP AND HANG UP WITHOUT GOING BACK TO YOUR DESK!

Enjoy full wireless freedom! Add the GN 1000 Remote Handset Lifter to your GN Netcom wireless headset system, and you're completely free to roam. With the GN 1000 RHL, you can answer calls, and end them, from wherever your wireless headset takes you.

Two minutes to lift-off. Unlike some handset lifters, the GN 1000 RHL is incredibly easy to install. A few simple steps, and you're ready to go.

One-button operation. It's incredibly easy to use, too. When you hear the ring tone, you push a button. The GN 1000 RHL immediately lifts the handset and connects the call. At the end of your call, just push the button again to hang up.

Technology you can trust. Most handset lifters respond to sounds within a certain frequency range. If they're not perfectly adjusted, you can miss calls or be signaled when there isn't a call. But the GN 1000 RHL senses the magnetic field the speaker generates when your phone rings, which means it's virtually foolproof. So you never miss a call.

No compatibility or reliability worries. The GN 1000 RHL's design is based on a comprehensive study of telephone measurement specifications, so it works with over 90% of all business telephones. Unless your phone has a truly unusual design, it will work with yours. And since the GN 1000 RHL has been tested to lift and lower 100,000 times, you know it will keep working. For a good long time.

FEATURES

- Automatically lifts and lowers handset
- Works with most standard phones
- Magnetic sensor technology
- Fast operation
